

**PLUMBING VALVE COVER FOR
AVOIDING INTERFERENCE WITH FAUCET HOSE**

Abstract of the Disclosure

5

A plumbing valve cover is disclosed for use in conjunction with under-sink plumbing to avoid interference with the operation of a flexible spray nozzle hose used in conjunction with a spray nozzle. The plumbing valve cover may be coupled to the under-sink plumbing or cabinet wall. The plumbing valve cover may partially cover the under-sink plumbing and include clearances for multiple plumbing lines which may exit a supply valve. The
10 plumbing valve cover may include markings to aid in sizing the cover to variations in the length of a supply line. The preferred embodiment would be a single piece, injection molded plastic apparatus which includes structural ribs and C-shaped mounting clips which mechanically couple the plumbing valve cover to the supply valve.
